

Immunizations help prevent childhood diseases

Do you know that diseases once thought to be history still linger today? Whooping cough, measles and polio are still health threats and all can cause serious medical complications for children.

What's the best defense against those and other childhood diseases? It's simple: Immunizations.

If you have children, getting them immunized is one of the best gifts you can give. It's included in your BCN benefits.

It takes four or five visits to a health care provider to immunize a child against most childhood diseases by age two. Vaccines prevent children from becoming seriously ill from diphtheria, pertussis (whooping cough), tetanus (lockjaw), polio, measles, mumps, rubella (German measles), Haemophilus influenzae type b, meningitis, hepatitis B and chicken pox.
